

ABSTRACT

5 An inkjet printer refill system including a printer cartridge having a refill port including inlets corresponding
to, and in fluid communication with, each of a number of storage reservoirs, said reservoirs each dedicated to
store a predetermined one of a number of printing fluids; and at least one refill cartridge containing one of the
number of printing fluids and including a connector arranged to mate with the refill port, the connector having
an outlet located to communicate with a particular one of the refill port inlets in communication with a
10 particular one of the number of storage reservoirs dedicated to store the printing fluid contained within said
refill cartridge.
